

Ender Vibration Data Analysis V2

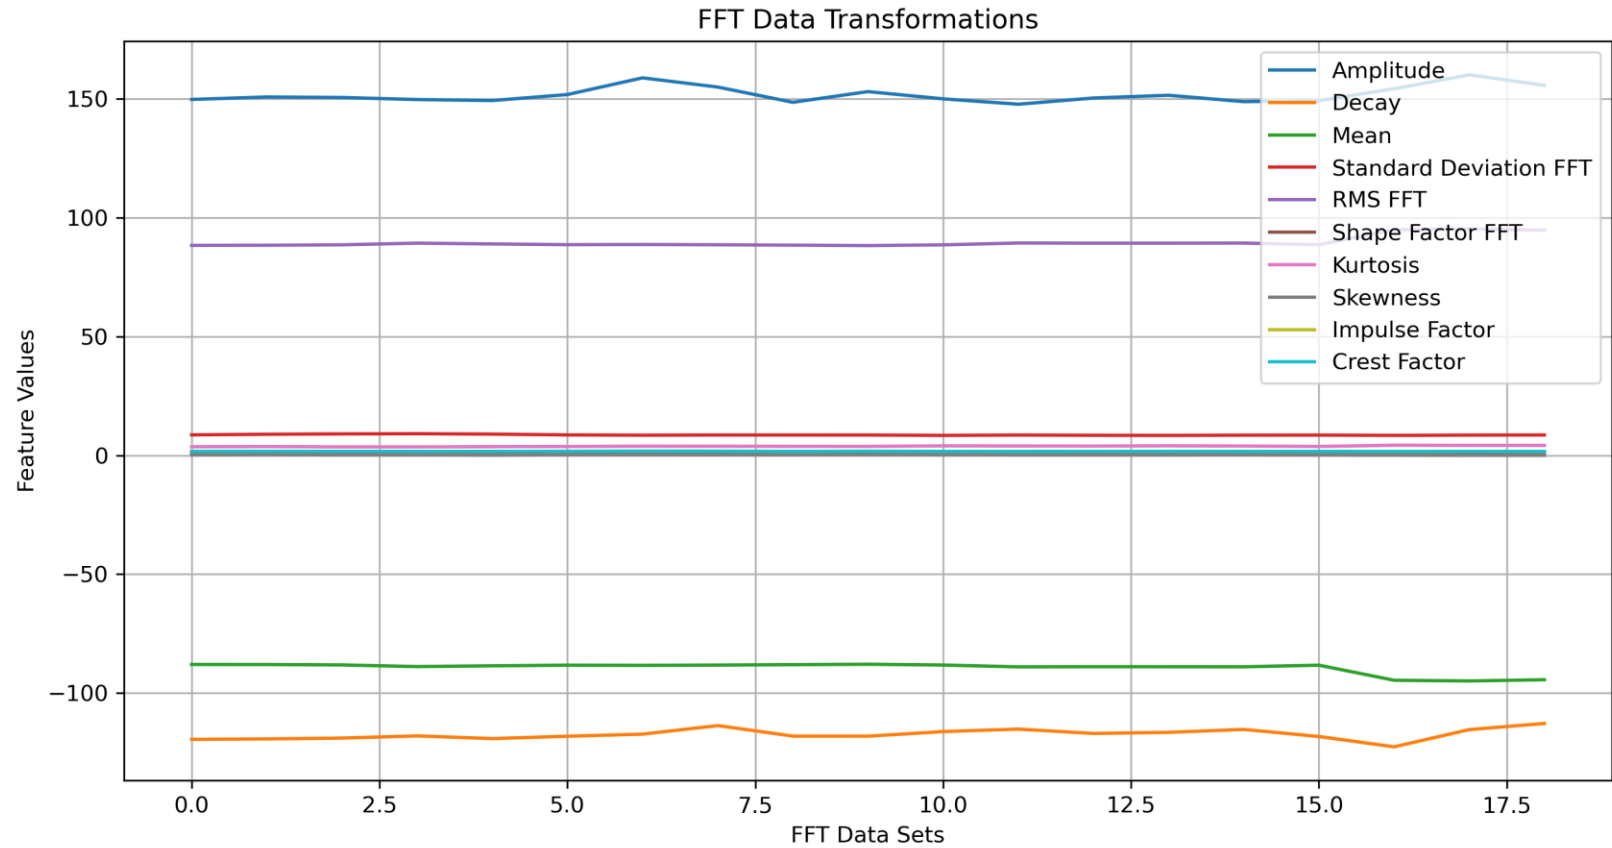

Dao Bui

Considerations and Process

- My program does not consider a sliding window
- Each of the 3 acceleration values are averaged with one another, so that we only use one data point for acceleration
- The calculations consider the entire data set, not just per file.
- I am unsure if you will be able to zoom in on the pdf and png files.
- You will most likely need to see the files themselves for a more accurate look.
- Finally, some of the FFT data uses the same algorithm as the sample data because I believed that there wouldn't be a difference in some
